

OUR NETFLIX

- A Modern React-based Streaming UI Project
- Interactive components & dynamic UI
- Responsive design like real Netflix platform

Developed By:

- Aditya Pandey
- Chandan Singh
- Amit Soni

Objective

- • Build fast & responsive UI
- • Understand component-based structure
- • Handle real-time data efficiently

Technologies Used

- • React.js – UI development
- • JavaScript – logic handling
- • CSS/Tailwind – styling
- • Node.js – backend

• • Node.js – backend

Components Used

- • App Component – Main root
- • Header Component – Navigation UI
- • Footer Component – Bottom section
- • Card/List Component – Display data
- • Form Component – User input handling

Role of Components

- • App – controls entire application
- • Header – navigation & branding
- • Footer – extra info & links
- • Card – reusable UI blocks
- • Form – handles user interaction

React Concepts Used

- • **useState** – manage dynamic data
- • **useEffect** – API calls & lifecycle
- • **Props** – data transfer
- • **JSX** – HTML in JS

• • JSX – HTML in JS

Working Flow

- • User interacts with UI
- • State updates in component
- • Virtual DOM updates
- • Changes reflect on screen

Code Concept

- • Components return JSX
- • Functions handle logic
- • Reusable structure
- • Clean and readable code

FEATURES

- *Interactive User Interface – Smooth and dynamic UI that allows users to easily interact with the application.*
- *Reusable Components – Components are reused multiple times which reduces code duplication and improves efficiency.*
- *Fast Performance – React uses Virtual DOM which makes the application faster and more efficient.*
- *API Integration – Data is fetched dynamically from external sources to display real-time content.*
- *Responsive Design – Application works properly on mobile, tablet and desktop devices.*
 - *State Management – useState and other hooks are used to handle dynamic data effectively.*
 - *Clean & Structured Code – Code is well organized, readable and easy to maintain.*
 - *Real-world Application – Project is designed similar to real platforms like Netflix.*

Conclusion

- • React makes UI powerful
- • Efficient & scalable apps
- • Important for modern dev
